COMPANY
PROFILE

About Us

The establishment of Kenpack Limited

We are local manufacturers of wooden pallets for storage, sea exports, and air exports. We are based on Mombasa Road opposite City Cabanas.

We also manufacture corner boards for cargo unitization and palletization which reduce cargo damage on transit.

Our Philosophy

We create high-quality and renewable packaging products suited to our client's needs we are committed to providing quality and customizable product, making us the top of mind supplier customers' call first when looking for pallet solutions. We offer unmatched expertise and experience in the pallet industry. Kenpack Limited is focused on continually improving its ability to produce pallets at the lowest possible cost and strives to be the best at meeting the customer's expectations.

The company is accredited by the Kenya Plant Health Inspectorate Service (KEPHIS) to treat wood packaging materials by way of heat treatment.

Our wood products are heat-treated at 56 degrees celsius for 30 minutes as per International Standards on vital sanitary measures.

Our Vision

To be the most efficient and effective in our field of operation.

Our Mission

To provide outstanding products that meet our customer's demands while maintaining a community-based partnership in renewable resources.

Our Products

Wooden Pallets

Kenpack Ltd has been accredited to wood packaging materials by way of heat treatment at 60°C for approximately 30 minutes according to international standards on vital sanitary measures. In accordance with the provisions of the ISPM No. 15, Kenpack Limited has been assigned the number IPPC-KE-013 by the Kenya Plant Health Inspectorate Service (KEPHIS) is responsible for regulating the quality of packaging materials.

Why the heat-treated pallets?

- Eliminate pests and fungi
- Best for international trade
- More durable than non-heated wood pallets
- Can be recycled and reused

Reinforced Plastic Pallet

Plastic Pallets

The benefits of plastic pallets include durability, cleanliness, sustainability, and long-term cost savings. Plastic pallets can either be rackable, stackable, or nestable.

Rackable pallets are designed to be used in pallet racks. Stackable pallets allow the palletized product to be stacked. This saves on valuable floor space. Nestable pallets are designed to nest in stacks when empty which saves on valuable floor space when the pallets are not in use. They also save on valuable freight space when shipping empty pallets.

Product Specifications:

1. Static Load Capacity up to 5 tonnes
2. Made from 100% Virgin Material
3. Free from Moulds, Mildew, Germs & Insects
4. Ideal for Cold Storage
5. Easy to Clean and Maintain Hygiene
6. Anti – Slip Components
7. RFID Chip Slot for Tracking
8. No Nails / Splinters
9. Exempt from ISPM15 regulations
10. One Piece (not welded or joined)

Non-reinforced Plastic Pallet

Strapping Rolls & Machines

Strapping rolls and strapping machines Strapping roll is an economical material designed for light to medium duty unitizing, appetizing, and bundling. It is available in various widths and thicknesses. After the strap is tensioned, the strap is often sealed to itself using metal clips.

Strapping equipment can either be hand tools or strapping machines. For both equipments, a dispenser is used to dispense the strap. In the manual hand tool, a tensioner is also needed.

Stretch Films

This is a highly stretchable plastic film that is wrapped around items.

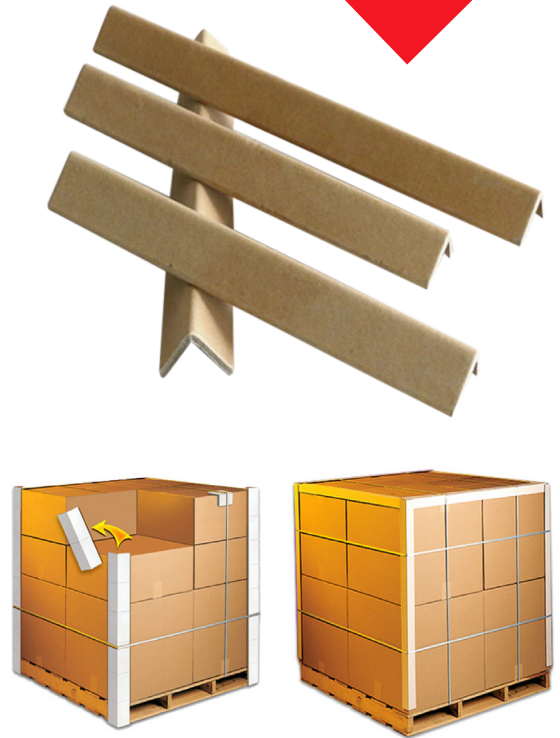

The elastic recovery is used to keep the items tightly bound. When it comes to pallet unitizing, stretch films have several functions such as improving the stability of packages, efficient handling, and storage of unit loads, tamper resistance, and resistance to package pilferage, dust and moisture resistance, and some degree of sun protection (UV stretch wraps).

Corner Boards

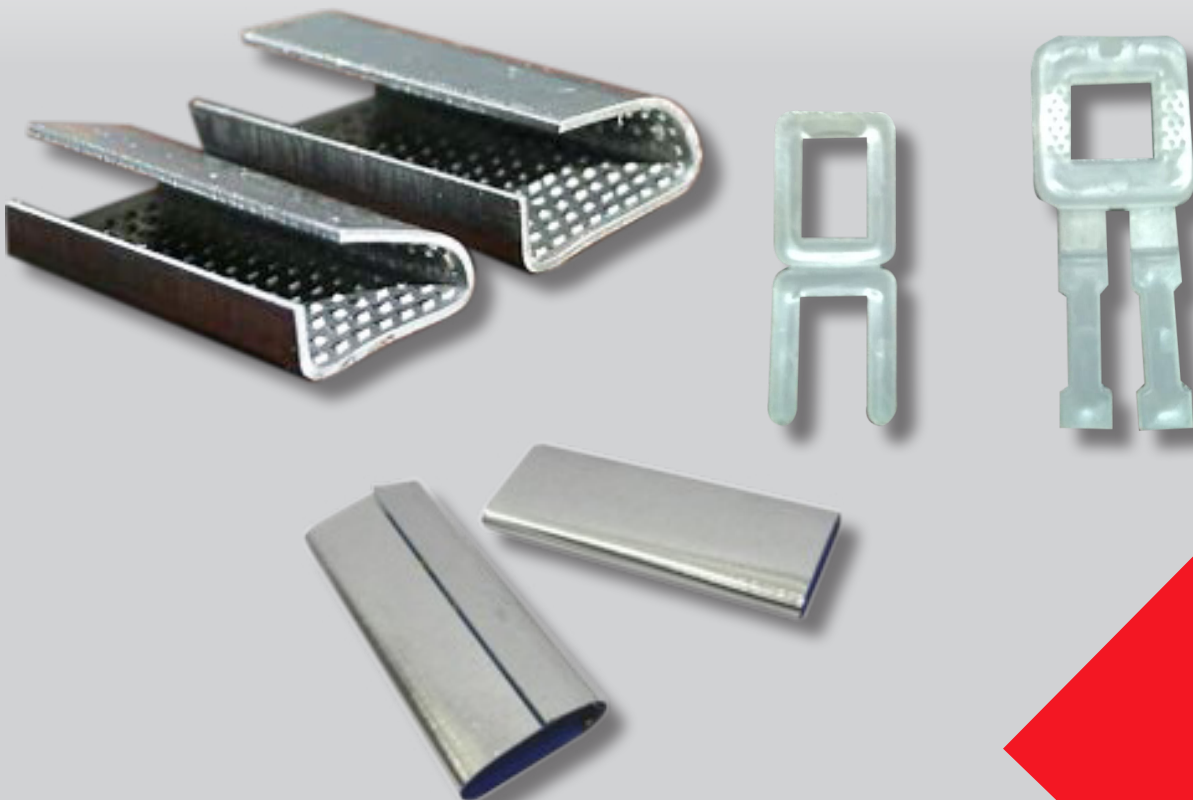

Protect and strengthen your pallet loads with corner boards. Our corner board rugged construction maintains product integrity while creating pallet stability. Our corner board protects the edges of palletized freight from strapping, stretch film, and possible damage from shipping and handling.

Our Corner board is formed and reinforced by wrapping the top ply of paper for added strength and a cleaner appearance. Corner boards will improve stacking ability due to enhanced column strength, and provide cost reduction through better yields. Outer surfaces can be printed with your logo, advertisements, and handling instructions.

Plastic and Metal Clip

These are clips that are used for sealing the strapping roll to itself as is often the case. This is done using a tensioner.
